

Lancaster Legacy

Lancaster Legacy is a high-end mixed-use residential and commercial development located in District 1, Ho Chi Minh City, Vietnam. The project is developed by Trung Thủy Group and forms part of the Lancaster-branded portfolio of premium urban developments.

Positioned in one of Ho Chi Minh City's most central districts, Lancaster Legacy has been designed to deliver a landmark development that integrates luxury living with commercial and office functionality.

The development comprises high-end residential apartments, officetel units, and retail and office spaces, creating a flexible, multi-purpose environment that caters to modern urban lifestyles and business needs. Given the scale and positioning of the project, system reliability, efficiency, and long-term performance were key considerations during the specification phase.

To support the building's mechanical and HVAC systems, a comprehensive range of flow control solutions was specified, including Pegler gate valves, Y strainers, check valves, ball valves and butterfly valves. These products ensure precise flow regulation, operational efficiency, and dependable performance across both residential and commercial applications within the development.
