

# National Currency Printing Factory

The National Currency Printing Factory is a specialised industrial manufacturing facility located at Hoa Lac High-Tech Park II, Hanoi, Vietnam. Situated within one of Vietnam’s key high-tech industrial zones, the project plays an important role in secure and precision-based manufacturing.

The project was delivered over the 2023–2024 period and has been designed specifically as a printing factory and industrial manufacturing facility, requiring high levels of reliability, control, and operational stability across its building services systems.

Given the nature of the facility and its operational demands, robust and dependable mechanical infrastructure was a critical requirement. To meet these needs, a range of flow control solutions was specified, including Pegler gate valves and butterfly valves. These products support consistent system performance, durability, and efficient operation within a controlled industrial environment.
